We could look at the sampling results for the fish and crab and prepare a health consultation for that data if that would be helpful.

Carrie,

We expect the initial sampling results to be in this week. We will use these sediment results to pick the fish/crab analyte list, and once the fish/crab sampling plans are ready, do the fish/crab sampling in a month or two. These samples will be for human exposures. Would you like to see these sampling results? I would be interested in your thoughts on the fish/crab analysis to be done.

Thanks,

Gary Miller

Just checking up on Gulfco.

Thanks!
